

Jeff Bezos Empire in One Giant Chart

Jeff Bezos' net worth continues to rise. He recently surpassed Bill Gates as the world's richest man, with \$137 billion to his name. His ascent to the top may be extremely short-lived, due to his pending divorce.

Nevertheless, I was amazed at how many companies Jeff Bezos owns or has significant investments in. Many people immediately associate him with Amazon, a company he founded in 1994. He still owns 16% of Amazon's shares. He also has an investment company called Bezo Expeditions that manages his venture capital investments.

Jeff owns the Washington Post and was one of the first investors in Google in 1998. He also put money in Uber, Airbnb and Business Insider. Last year, he and his late wife, pledged \$2 billion to help homeless families and create pre-schools.
